CHESTER A. WILLOUGHBY, CLERK

United States Senate

COMMITTEE ON MANUFACTURES

December 9, 1927.

Milwaukee Radio Amateur Club, Inc.
Milwaukee, Wisconsin.

Gentlemen:

As allocations now stand, the amateurs are recognized in international communication and some channels are left open for their use in the neighborhood of the 20 and 40 meter wave bands. There will be no change in this status unless Congress ratifies the international treaty, and this proposed treaty would not become effective before January 1929.

It is true the amateurs in this country have been allowed more channels in the 20 and 40 meter wave bands than they are internationally, but it is believed by the Radio Commission that they will be able to get along quite well with the provisions in the proposed treaty.

The enclosed circulars are sent you with the thought that they may be helpful in clarifying in your mind the new regulations and operation of amateur radio stations.

I wish to assure you that I am anxious to protect in every way the interests of the American amateurs and if there is any further information you desire in this connection I will be glad to have you write me.

Sincerely yours,

Clarence C. Dill
